

Our experience with a wide range of Transport companies during the last 14 years, has enabled AbaTrans to become a highly-effective solution provider for the transport industry.

Sure you're NOT losing money?

The biggest problems with off-the-shelf software is usually with management, operational or costs reporting. Summaries, consolidations and statistical analysis are mostly inadequate or non-existent. Information cannot be produced in the exact format or depth-of-detail that is required.

As a result, month-end reconciliation is time-consuming. Are you constantly having to re-type data into spreadsheets to produce meaningful management information regarding cost breakdowns, sales splits, gross profits, etc.?

Are you losing the paper war?

How many wasted hours do you spend on administration, time-consuming queries and paper shuffling when your focus should be on external client relations, growing your business and making profitable sales?

Is everybody on the same page?

When data and common information cannot be seamlessly integrated or shared between different divisions such as Operations, Warehousing and Accounting, you end up ...

- wasting hundreds of man-hours,
- duplicating data and effort, and
- Exponentially increasing human errors.

“Fitting your software to Your Business - NOT your business to your software.”

We customize the software to suite your own unique requirements.

The standard capture screens and public documents such as invoices and statements, can be modified for your company and identity. Additional customized reports can be added specifically for your operational and management reporting purposes.

Our software can also produce your data in the required formats for integration into industry-standard accounting packages such as SAGE, AccPac and Pastel. It can also output data for use in spreadsheets.

The ability to constantly customize our AbaTrans solutions to suite your needs means that “the software grows with your business needs” - so it never becomes obsolete.”

Do you agree?

Every transport company is unique. Some companies use sub-contractors or only do full loads. Some need a warehousing component. Many act as brokers for the industry.

Information is power - Allowing management to be proactive rather than reactive.

Management Information Reporting needs vary from company to company. The need for up-to-date, in-depth, management, statistical & accounting information is a major requirement.

Crisis-(mis)management has far-reaching repercussions. The "left hand doesn't know what the right hand is doing" - even in the smaller companies. What are you basing your decisions on?

You have special requirements for multi-currency & VAT / GST. Territorial areas differ from one transport company to the next - some only do local work, others have cross-border accounting & document needs.

Monitoring of Fleet Maintenance and fuel costs is vital.

Your largest expenses are for fuel, maintenance and the cost of repairs. Do you have your own workshop or do you outsource? How difficult is it to monitor maintenance schedules, availability of trucks, spares stock and truck histories?

EASY TO USE

The AbaLoad © Debtors and Load Management module is the core central point of "one-off" data capture. It provides the source for comprehensive management reporting and statistical information. It can also be used in a brokering environment.

- Full history of all invoices, credit notes and payments.
- Linked Sub-Contractors and Proof of Delivery (POD's).
- Load Histories and management.
- Full search & sort functions on Job No., Customer codes, etc.
- All Reports viewable before printing: Invoices, Statements, Credit Notes, Age Analysis, Outstanding Invoices, Loads not invoiced, VAT, Sales by Customer, Creditor & Truck, Sub-Contractors.
- Additional reports can be developed to support your unique requirements, for example: Fuel Purchases and Usage, Tonnages Analysis Report, Costing by Creditor, Vehicle and Category, Annual Revenue Summaries e.g. Comparisons, by Customer.
- Additional functionality can be developed to support your unique requirements, for example: Creditors Payment Module, Petty Cash, Convert a Sales Quotation to a Job Card or Number.

AbaWarehouse © Warehousing & Load Consolidation is a controlled point of entry for all goods entering and exiting your warehouse, together with detailed management information.

- Goods Received into warehouse.
- Generate Consignment notes and invoices.
- Load Manifest reporting.
- Multi-Loads and Distribution including multiple drop-off.
- Standard Reports include Goods Received Notes, Consignment Notes, Invoices, Manifests, Sales Analysis, Age Analysis, Statements.
- Additional reports can be custom-developed to support your unique requirements, for example, Trip Sheets (for multi-distribution of loads at point of arrival), Gross Profit per Load.

FLEXIBLE

AbaFleet © Workshop Maintenance is used for the control of all fleet expenditures (creditors), vehicle maintenance, spares, consumables & historical records for management analysis.

- Complete vehicle history in terms of maintenance.
- Cost analysis of vehicles / entire fleet for any period.
- Stock control of spares and consumables.
- Standard Reports include Maintenance Schedule, Job Cards, Costs by Vehicle, Creditor and Category, Stock Summary.
- Additional reports can be custom-developed e.g. Fuel Purchases and Usage e.g. by Depot, Vehicle, Consumption, Profitability Report.
- Can be linked to AbaLoad Module.
